Key Mechanics

- **2D Manhattan Map:** Each block on the map shows a visible number of rats, but the amount of hidden trash is not displayed. You must infer it based on rat behavior and your previous actions.
- **Resource Optimization:** You only have a limited number of exterminations and clean-up actions per turn. The challenge is using them smartly to minimize the number of rats in the city each round.
- **Long-Term Strategy:** Sometimes exterminating a large number of rats may seem like the best option, but if you don't manage the trash, the rats will return. Cleaning trash strategically can prevent future infestations, but it's a risk if unnecessary.

meanwhile...

Manhattan is in danger. Beneath the vibrant and chaotic surface of the city, a rat infestation has begun to spread through its streets, parks, and forgotten corners. At the same time, hidden piles of trash are fueling the problem, creating breeding grounds and infestation hotspots. The Pest Controllers have been called into action, but the challenge is greater than it seems: resources are limited, and the race to cleanse the city is a fight against time.

Chapter 1

The City's Enigma

The infestation is not just about the visible rats; the true threat lies in what can't be seen. Manhattan's streets are full of critical spots where hidden piles of trash are feeding the rats. As a Pest Controller, your mission is to eliminate as many rats as possible, but without a clear view of how much trash is lurking in each area, you face a real urban puzzle.

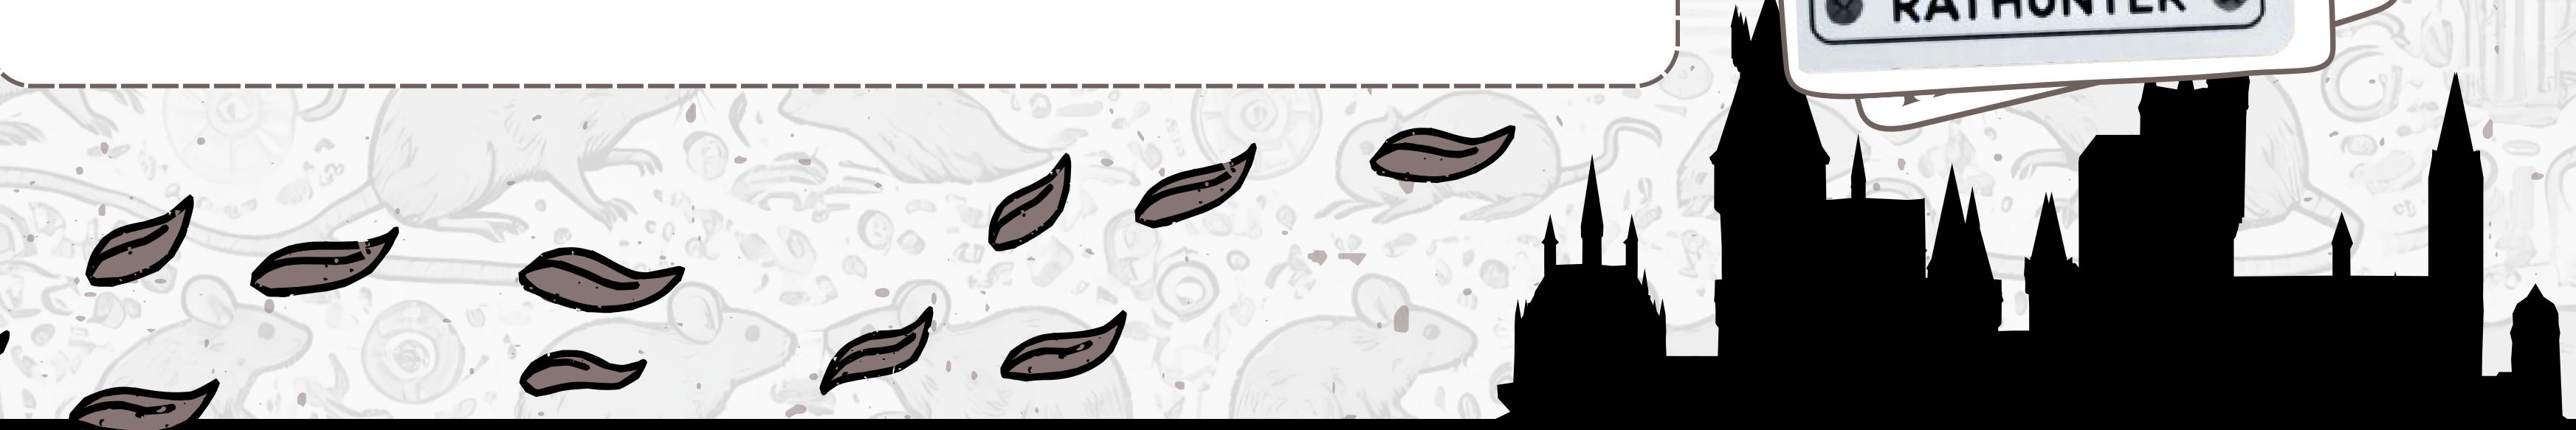

Each section of the map has a visible number of rats, but the amount of hidden trash varies, fueling rat reproduction and infestation growth. You must make smart decisions: should you focus your resources on exterminating the rats now, or clear the trash to prevent future outbreaks?

Chapter 2

The Resource Game

The resources at your disposal are limited. You have a restricted number of rat exterminations and trash clean-up actions each turn. The key to success lies in finding the most efficient way to use them to maximize your impact. Every action counts, and every mistake can be costly. A poorly placed extermination or a wasted clean-up could leave part of Manhattan vulnerable to a new wave of rats.

Chapter 3

The Race Against Time

The RatKing, leader of the rats, is using the city as his playground. As the rats breed, infestation hotspots spread, and poorly managed areas become uncontrollable. Over time, the rats will move across Manhattan, and without the right actions, infestations can grow faster than you can contain them. Your goal is to completely cleanse Manhattan, eradicating the rats before the city is overwhelmed by trash and pests. Each action is a crucial piece of the puzzle that can either bring you closer to victory or further into chaos. The most skilled players will learn to anticipate the spread of infestations, prioritizing critical areas to prevent the RatKing from gaining ground.

Epilogue

Victory or the RatKing's Rule

The fate of Manhattan is in your hands. If you fail to manage your resources effectively, the RatKing and his hordes of rats will take control, and the city will succumb to infestation. But if you master the art of strategy and manage to solve the puzzle of extermination and clean-up, Manhattan can be saved, and the RatKing will be defeated. Can you solve the urban puzzle and free the city from the rats? Or will you allow the RatKing to continue his reign in the shadows? Each turn, each decision is a crucial piece of the puzzle. Victory or defeat is just one move away!
